## Mini Crack Sealing Machine BPM-100 from TICAB

The Polish company "TICAB" producing and selling asphalt road repair and maintenance equipment  
The equipment of our production is operated in 53 countries of the world, receiving positive feedback from users.

The BPM-100 TICAB Mini Crack Sealing Machine is a portable unit widely used in the field of road construction to fill and repair cracks, joints, splits, delaminations in asphalt pavement. The manual caster resembles a cart. The unit consists of a welded metal frame equipped with wheels and a hopper mounted on it Bitumen briquettes are put into the hopper, which are heated with a burner and a gas cylinder to a temperature of 180 - 200 °. There is a thermometer on the caster body, which allows to control the temperature of bitumen in the hopper and avoid overheating of the material.

Inside the hopper there is a so-called agitator designed for mixing the material, as well as a tap - dispenser, with which the heated mixture is fed to the outside.

### Characteristics:

- Easy transportation to the construction site;
  - Maneuverability and mobility;
  - Performance of quality patching;
  - Can be operated by a single person with no special skills;;
  - Wide range of applications: repairing cracks, filling joints, joining asphalt edges, filling gaps on bridges, viaducts or airfields;
  - The possibility of heating the bituminous mixture to a temperature of +240 ° C.
  - Presence of turning wheels;
  - Indicator that displays the temperature of the mass and the gas pressure regulator;
  - Even material heating and the possibility of regulating the temperature of the bituminous material;
- An ability to mix the working material in the hopper of the manual joint filler;
- Mechanical feed control valve;
  - Number of blocks-2
  - Volume - 70L
  - Reducer;
  - Heating - propane gas.
